

BE fix report — NewUsers auth (epic CRCT-181)

Short status for Product: first NewUsers deploy was checked against the Jira tickets. Below is each ticket in the same style as the task descriptions — what was wrong, what backend fixed, and what QA should re-run. Legacy `/api/v1/users` stays for the old app. New flow is only `/api/v1/newUsers`.

Scope reminder

- Legacy Postman contract unchanged (register, OTP Bearer, setPassword, password field).

- NewUsers

Prepared for Product Owner / QA. Implementation lives in carland_auth (NewUsers package + legacy password isolation).
